

EDITORIAL

In modern society, the issues in healthy and environmental sciences have been more concerned by governments and publics, with the increasing ecological crisis due to environmental pollution, global climate change etc. Botanical science, an ancient discipline, is facing more and more fast and serious challenges in this context. The ***Global Journal of Botanical Science*** covers all aspects in botanical science, with topics ranging from the molecular, cellular, developmental, and physiological processes of plants, through to the response of plants to global climate and environmental change. It receives original high quality manuscripts from significant theoretical or experimental approaches. We will do our best to publish articles rapidly and openly available to the readers worldwide.
