

Editorial

Orthopaedics, trauma, orthopaedic rehabilitation has shown many new and electrifying changes in the past few years. New instruments and technology have produced major advances in the treatment of arthritic joints. These technological changes lead to studies emphasizing the improved outcomes and results. Primary among these factors is the role of rehabilitation.

Rehabilitation is an essential part of the postoperative procedures. It is actually about the patient's care that we are likely to ignore or have the therapist and others direct. Controversy regarding this does exist, as well as a lack of evidence-based course of action to direct rehabilitation pre- and post-operation for many commonly performed procedures.

International Journal of Orthopedics and Rehabilitation is a peer reviewed journal committed to the dissemination of high-quality research related to the latest trends and advances in orthopaedics, trauma, orthopaedic rehabilitation and related knowledge from all over the world. Our aim is to provide the platform for exchange of new clinical and scientific information in the most precise and expeditious way to achieve timely dissemination of information and cross-fertilization of ideas related to the field of orthopaedic and rehabilitation.

The articles published in the first inaugural issue cover the topics, which are breakthrough for future submissions. However, editors of ***International Journal of Orthopedics and Rehabilitation*** would be pleased to consider other topics including those, which are able to motivate a proposal of a special journal issue.

Finally, we hope that ***International Journal of Orthopedics and Rehabilitation*** will become appealing for sharing ideas among a wide audience of scholars, practitioners and researchers. It is a great pleasure to invite colleagues working in the fields of in orthopaedics, trauma, orthopaedic rehabilitation to gather their efforts with the editors for providing a new prestigious interdisciplinary forum.
