

Editorial

This issue provides four excellent articles that expose scientific insight in polymeric materials. This industrialized world more and more demands scientific fundamentals on materials. Structural investigations on nanomaterial attract many engineers and developers. Bio-friendly polymers such as lignin and PLA are widely used in medical devices and food packaging systems to ensure minimization of environmental damage. This issue of ***Journal of Composites and Biodegradable Polymers*** contributes to this rapidly changing study of biopolymers. We always appreciate your interest in this journal.
