

Editorial

Dear Readers/Colleagues,

It is my pleasure as Editor-in-Chief of the Journal of Nanotechnology in Diagnosis and Treatment, Savvy Science Publishers, to present you Volume 2nd Issue 2 of the Journal. The number of the papers is limited since we, the Members of the Editorial Board and Publishers, are trying to reach highest scientific standard of the Journal. This Issue covers the following topics: analysis of protein tumor biomarkers for cancer diagnostics and screening; distribution and influence of AuNPs into the organs of test animals; properties of gold containing bimetal clusters. These topics contribute to the new significant applications of nanotechnology in diagnosis and treatment.

Petar A. Atanasov, Professor, DSc
