

Editorial

The Journal of Dentists is an international scientific journal providing multidisciplinary fields in dental research and development. This journal includes up-to-date information in general dentistry and specific dental specialties. To serve the purpose of improving dental research and clinical innovation, **The Journal of Dentists** encourages the collaboration of both academic and clinical communities. The readers would be inspired from the worldwide and novel articles in many aspects. The current issue comprises a variety of evolutions and practical applications in dentistry.

The application of ozone therapy in dentistry was reviewed and incorporated into useful clinical practices. Since dentistry is the combination of art and science, a case report of prosthetic rehabilitation of the lost eye in a patient by custom made ocular prosthesis vividly and successfully verified the concept. A pilot study on attitudes, knowledge and behavior towards dental diseases among grade medical officers in the Kandy District, Sri Lanka showed the importance of increasing knowledge of medical practitioners regarding dental diseases and to promote the prevention of dental diseases. Composite resin materials are widely used in clinical practices, and the mechanical properties of nylon 6 nano fiber reinforced dental composite resins were evaluated in an experimental study. Last but not the least, managing large periapical lesions would sometimes face with a dilemma of choosing from nonsurgical or surgical intervention. Report of two cases with large periapical lesion treated with the usage of calcium hydroxide provided a valuable and useful option for clinical guide.

As an editor, I deeply appreciate the contributions and efforts of all the authors for the enlightenment and inspiration. The content would greatly expand the view and scope of the readers. To make an effort in clinical science and patient care, original research articles, review articles, and clinical studies in all areas of dentistry are welcomed for submission. Looking forward to participate in the cutting edge of dentistry and hope you enjoy the articles from the current issue!
