

Editorial

The Journal of Dentists (TJD) has successfully published its 3rd volume. **The Journal of Dentists** is an international journal published papers of original article, review paper and case reports in all fields of dentistry. **The Journal of Dentists** has dedicate to promote the advances of dentistry and provided a platform for the interaction of dentists and researchers in the world.

In this issue, a systemic review of bone anti-resorptive treatment toxicity to immunity cells and its role in osteonecrosis of the jaw is published. The content of this manuscript can be useful in clinical dental practice and future studies. In addition, various cases reports also showed the successful treatment of cases by fiber-reinforced ribbon-composite provisional fixed partial denture in adolescence; prosthetic treatment of children with ectodermal dysplasia; and the bone density changes during before and after osteotome technique for implant installation.

The Journal of Dentists welcomes the authors to submit different kinds of their papers (original, review, short communication, case reports) for publication in our journal. **The Journal of Dentists** will review all the submitted manuscripts, give constructive comments, and make a favorable final decision soon.
